Copilot Readiness Assessment

Get ready for Copilot before you switch it on

Everyone wants Copilot. Few organisations are truly ready.
Copilot has the potential to transform how teams work, but it depends entirely on the quality, structure and security of your Microsoft 365 environment.

Our Copilot Readiness Assessment helps you understand where you stand today and what needs to change before you move forward.

The challenge

AI will amplify whatever already exists in your environment

Copilot works with the data, permissions and policies already in place across your organisation.
If those foundations aren't right, the impact can be significant:

- Sensitive data exposed more widely than intended
- Inconsistent information shaping AI responses
- Gaps in compliance and governance
- Investment without clear return

Copilot can drive real productivity but only when the environment behind it is properly prepared.

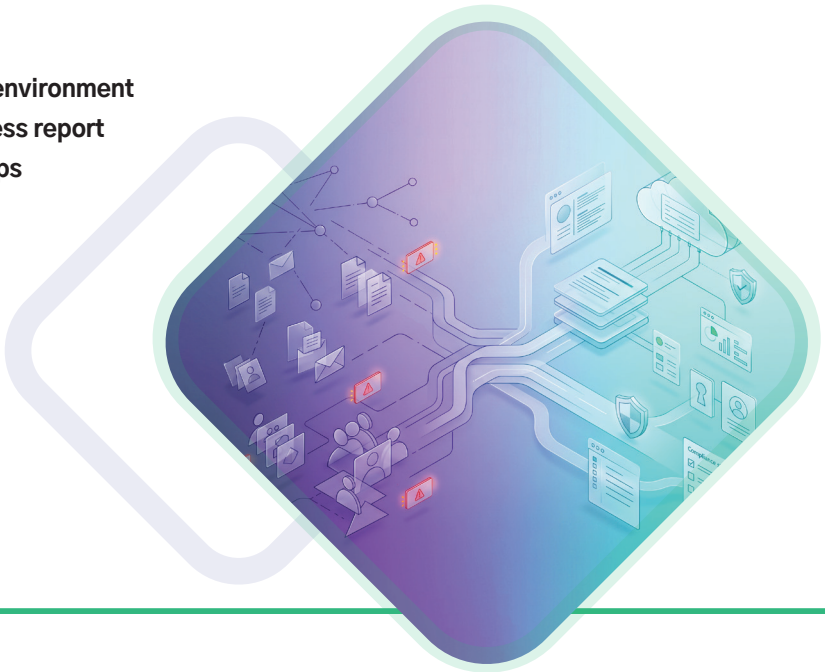

Our approach

A structured assessment of your Microsoft 365 foundations

We take a practical, security-led view of your environment to determine whether Copilot can be introduced safely and effectively.
Our assessment identifies the gaps that could affect adoption, risk and value and gives you a clear route forward.

Assess → Report → Act

- **Assess your Microsoft 365 environment**
- **Deliver a structured readiness report**
- **Provide prioritised next steps**

What we assess

Four core areas that determine Copilot readiness

- **Tenant configuration**
  How your Microsoft 365 environment is structured and maintained
- **Identity and security**
  Who has access and how that access is controlled
- **Compliance and data governance**
  How sensitive data is classified and protected
- **Monitoring and visibility**
  How activity is tracked and risks are identified

4-pillar model

Four core areas that determine Copilot readiness

What you get

Clear insight. Practical next steps.

At the end of the assessment, you receive:

- **A Red–Amber–Green readiness report**
  A clear, colour–coded view of where you stand
- **Prioritised recommendations**
  A structured plan to address the gaps that matter most
- **A defined path forward**
  Clarity on what's required before rollout

Red – act now	Amber – improve	Green – ready

The outcome

A more confident, lower–risk rollout

Organisations that complete the assessment:

- Move forward with confidence
- Identify and reduce risk early
- Avoid unnecessary cost and rework
- Accelerate time to value

Start with clarity

Before you switch Copilot on, make sure your organisation is ready.
